LICENCE - Mitigation

This licence authorises actions that would otherwise be offences under the above legislation

Any request for information in this licence will be considered under the Environmental Information Regulations 2004 and the Freedom of Information Act 2000 as appropriate.

Natural England Reference:	2020-45270-EPS-NSIP1-8
Date issued:	02/05/2023
Licence valid from:	02/05/2023
Licence expiry date:	31/12/2031

Under the Conservation of Habitats and Species Regulations 2017 (as amended) and the Wildlife and Countryside Act 1981 (as amended) Natural England has granted this licence for the purpose of:

Imperative reasons of overriding public interest including those of a social or economic nature and beneficial consequences of primary importance for the environment, under section 55(2)(e) relating to:

Licensable activities associated with Construction of HS2 line through Warwickshire

To:

LICENSEE (full name):	[REDACTED]
Company name (if relevant):	Balfour Beatty Vinci
LICENSEE Address:	IM Building, Coleshill Manor Business Park, Coleshill, Warwickshire, B46 1DL

This licence is granted subject to the Licensee, including servants and named agents, adhering to the conditions, notes and licence documents specified below. The following person is authorised to act on behalf of the Licensee:

NAMED ECOLOGIST (full name):	[REDACTED]
Company name (if relevant):	Systra
NAMED ECOLOGIST Address:	Lancaster House, Newhall Street, Birmingham, B3 1NQ

At (locations):

Site name:	Stoneleigh Park
Address:	Avenue A, Stoneleigh Park, Stoneleigh, Warwick
County:	West Midlands
Postcode:	CV8 2TA
OS Grid Reference:	SP326716

For the following species, maximum numbers and licensable activities:

PLEASE NOTE				
The maximum number(s) stated in the table below refers to the maximum number of individuals of the stated species that can be captured or transported under the terms of the licence and the maximum number/s of resting places or breeding sites that can be damaged or destroyed under this licence (if applicable). Maximum numbers cannot be specified and do not apply to disturbance activities. The activities permitted below must be conducted by the methods as specified under the terms of this licence (see conditions 10 to 14).				
Species (Scientific name)	Maximum number of individuals	Roost Type(s)	Maximum number of roost(s)	Activities
Brown Long-Eared	5	Day	8	Capture; Transport; Disturb; Destroy Resting Place
		Feeding	1	Capture; Transport; Disturb; Destroy Resting Place
Common Pipistrelle	20	Maternity	1	Capture; Transport; Disturb; Destroy Breeding Site
		Day	10	Capture; Transport; Disturb; Destroy Resting Place
		Transitional	1	Capture; Transport; Disturb; Destroy Resting Place
Soprano Pipistrelle	45	Swarming	1	Capture; Transport; Disturb; Destroy Breeding Site
		Maternity	3	Capture; Transport; Disturb; Destroy Breeding Site
		Hibernation	1	Destroy Resting Place
		Day	31	Capture; Transport; Disturb; Destroy Resting Place
Brandt's	3	Day	1	Capture; Transport; Disturb; Destroy Resting Place
Whiskered	3	Day	1	Capture; Transport; Disturb; Destroy Resting Place
Noctule	5	Day	2	Capture; Transport; Disturb; Destroy Resting Place

Licence documents

The Licensee, Named Ecologist and all persons authorised in writing by the Licensee must adhere to the specific details given in the documents, if referenced below with a date, and complied with in accordance to this licence.

Reference	Document name	Date
Figure D	Impact Plan	18/08/2021
Figure E2	Non-standard capture and exclusion apparatus	n/a
Figure E3	Specifications for mitigation / compensation	14/09/2021
Figure E4	Monitoring, management and maintenance	14/09/2021
Work Schedule	Work Schedule	29/03/2023
HMMP	Habitat Management and Maintenance Plan	26 February 2020
Other	n/a	n/a

Anything done otherwise than in accordance with the terms and conditions of the licence may constitute an offence.

Signed on behalf of Natural England (the relevant licensing body):

Signature:		Date:	02/05/2023

WARNING
<ul style="list-style-type: none">• This licence authorises acts that would otherwise be offences under the Conservation of Habitats and Species Regulations 2017 (as amended) and the Wildlife and Countryside Act 1981 (as amended). Any departure from the conditions relating to this licence may be an offence under that legislation;• This licence conveys no authority for actions prohibited by any other legislation;• This licence can be modified or revoked at any time by Natural England, but this will not be done unless there are good reasons for doing so. The licence is likely to be revoked immediately if it is discovered that false information had been provided which resulted in the issue of the licence.• Bodies corporate and their directors/secretaries are liable for offences under the Conservation of Habitats and Species Regulations 2017 (as amended) and the Wildlife and Countryside Act 1981 (as amended).

LICENCE CONDITIONS

1. The Licensee is responsible for ensuring that all terms and conditions of this licence are complied with.
2. The Licensee and Named Ecologist are responsible for all activities undertaken by Accredited Agents and Assistants (as described under 'Definitions' below) and of other persons they have appointed in relation to activities permitted by this licence.
3. The Licensee shall ensure that at least one copy of this licence is retained on each site until at least the expiry date of this licence. A copy of this licence shall be made available for inspection on each site and shall produce it on demand to any police officer or officer of Natural England.
4. No person shall carry out any activity permitted by this licence unless so authorised in writing by the Licensee. Each person shall produce a copy of their written authorisation from the Licensee on demand to any police officer or officer of Natural England.
5. Prior consent must be obtained from all relevant landowners and/ or occupiers before commencing any activities that are permitted by this licence. The role of the Licensee, Named Ecologist and any other persons so authorised under this licence does not itself confer any right of entry upon private land.
6. The Licensee shall permit, or shall ensure that measures are in place to permit until at least the expiry date of this licence, any officer of Natural England (accompanied by such persons as they consider necessary on production of their identification and stating the purpose of their presence, on demand) reasonable access to the site. The Licensee shall give all reasonable assistance to an officer of Natural England and to any accompanying persons.
7. All activities authorised by this licence must be undertaken in accordance with the requirements of any relevant animal welfare legislation, and all equipment used in relation to this licence must avoid cruelty, unnecessary injury or distress to any species covered by the relevant legislation.
8. Disturbance of bats and damage and/or destruction of bat roosts and habitats will be limited to those areas and structures shown in licensed Figure D. Where necessary, additional information is provided in the table below. No other bat or bat roost is permitted to be subject to disturbance, damage or destruction under this licence.

Species	Additional details of location
	<p>Brown long-eared day roosts, at the apex of the southern gable end of building B1.5 and inside B 1.5a, B1.14 and B1.20 and in holes in Trees 10A, 24A, 33A and 39A at Stoneleigh Park, to be destroyed. Common pipistrelle day roosts in cracks in the block work walls or beneath barge boards at the corners of Buildings B1.7 and inside building B1.11, B1.5b and B1.20 and in holes in Trees SPT1, SPT2, 7A, 31A, 33A and A44 at Stoneleigh Park, to be destroyed. Soprano pipistrelle day roosts, at the apex of the southern gable end of building B1.5, in gaps in the fascia on the north elevation of Building B1.10, in cracks in the block work walls or beneath barge boards at the corners of Building B1.11, at the apex of northern gable end, between barge boards and under eaves on inner east elevation of Building B1.14, inside building B1.10, B1.5a, B1.5b and B1.20 and in holes in Trees SPT1, SPT2, SPT15, 3A, 5A, 6A, 8A, 9A, 12A, 15A, 17A, 19A, 21A, 25A, 26A, 27A, 29A, 30A, 33A, 34A, 38A, 40A, 41A and 43A at Stoneleigh Park, to be destroyed. Noctule day roosts in holes in Trees 14A, 18A, at Stoneleigh Park, to be destroyed. Whiskered day roost in holes in Tree 17A at Stoneleigh Park to be destroyed. Brand't day roost in holes in Tree 32A at Stoneleigh Park to be destroyed. Brown long-eared feeding roost, inside Building B1.12 at Stoneleigh Park, to be destroyed. Common pipistrelle transitional roost within a hole in Tree 36A at Stoneleigh Park to be destroyed. Soprano pipistrelle mating roost within a hole in Tree 16A at Stoneleigh Park to be destroyed. Common pipistrelle maternity roost, under hanging tiles and inside the loft of Building B1.7 at Stoneleigh Park, to be destroyed. Soprano pipistrelle maternity roost, under hanging tiles, under the flat roof of the southern elevation and inside the loft of Building B1.7 and in holes in trees 7A, 10A, at Stoneleigh Park, to be destroyed. Soprano pipistrelle hibernation roost in hole in Tree 37A at Stoneleigh Park, to be destroyed.</p>

9. In relation to all known and potential maternity, satellite and hibernation roosts, all activities and timings must be undertaken in accordance with the licensed Work Schedule.

In relation to all other roost types, all activities and timings must be undertaken in accordance with the licensed Work Schedule; **or** undertaken if **all** of the following requirements are met:

- a. Activities described in the licensed Work Schedule are undertaken in the same chronological order; and
- b. Activities described in the licensed Work Schedule are undertaken on the same structures and locations; and
- c. Those same activities are undertaken no later than 12 months after timings described in the licensed Work Schedule.

Methodology

10. Prior to the commencement of licensed activities, the Named Ecologist or an Accredited Agent must ensure that all persons to be directly involved with these activities understand:
- a. where and when bats are potentially present;
 - b. the legislation relating to bats;
 - c. the methodology and activities that will be undertaken to safeguard bats,
 - d. contingencies to be followed if bats are found, particularly if unexpectedly;
 - e. that all activities relating to bats and bat roosts are restricted to the terms and conditions of this licence, and that bats and bat roosts are otherwise protected by law.

A copy of a written or otherwise accessible version of the presentation to persons about licensed activities and written confirmation that it has been provided to all relevant persons (including the date and persons' names) must be retained by the Licensee and Named Ecologist. This must be made available to any officer of Natural England or any police officer on demand.

11. The locating, capturing and handling of all bats, and fitting of all bat exclusion devices must only be undertaken by the Named Ecologist or an Accredited Agent, or an Assistant directly supervised by the Named Ecologist or Accredited Agent. All works must be undertaken using best practice methodology to ensure minimal risk to bats. Mitigation must be in line with the requirements set out in the most up-to-date edition of the '*Bat Mitigation Guidelines*'. Persons acting under this licence must abide by the advice on excluding bats, handling bats and working in bat roosts in the most up-to-date edition of the '*Bat Mitigation Guidelines*' and '*Bat Workers' Manual*'. In addition to this:
- a. Where bats are discovered and taken under this licence they must either be relocated to an alternative roost (see Definitions) suitable for the species, or where bats are temporarily held this must be done safely and bats released on site at dusk in, or adjacent to, suitable foraging/ commuting habitat in safe areas within, or directly adjacent to, the pre-works habitat. Where a bat is unexpectedly discovered in adverse weather conditions, condition 14 must be followed.
 - b. Temporary and permanent exclusion must be carried out using techniques specified in the most up-to-date edition of the '*Bat Workers' Manual*'. If one-way exclusion devices are to be used, each device must remain in position for a period of at least 5 consecutive nights throughout an uninterrupted spell of suitable weather conditions or will remain longer until these conditions prevail.
 - c. Prior to destructive works, an inspection using torches and/or an endoscope must be performed internally to search for the presence of bats. If any licensed vesper bat species is found and is accessible, each will be captured by gloved hand or hand-held net, given a health check and then each placed carefully inside a draw-string, calico cloth holding bag or similar for transport. If any licensed horseshoe bat species is found, the capture methods outlined in (e) will only be used after it has been shown that overnight dispersal or exclusion are no longer practicable methods.

- d. Following inspection and exclusion operations, the removal of any feature with bat roost potential will only be performed by hand or hand-tools in suitable weather conditions and under direct ecological supervision. Where applicable, materials will be removed carefully away and not rolled or sprung to avoid potential harm to bats. Removed and detached materials must be checked by the Named Ecologist or Accredited Agent for bats that may be clung to them. Mechanical demolition (see 'Definitions' below) of the roost must only be undertaken after the roost has been declared free of bats by the Named Ecologist or Accredited Agent.
- e. For sites where the presence of horseshoe species has been confirmed, the following exclusion method will be used: prior to work commencing, the Named Ecologist or Accredited Agent will conduct a thorough internal inspection for the presence of horseshoe bats. Only after the void is shown to be unoccupied will the destructive search commence, or all apertures into that void be closed and sealed (windows, doors, etc) by use of boarding, sealed tarpaulin or similar.

If a horseshoe bat is encountered, it will be left undisturbed during daylight. After all bats have dispersed overnight, the void will be sealed as described above. If all bats have not emerged, the Named Ecologist will either use torchlight and non-tactile human presence to disturb the bat to encourage it to emerge and disperse, during night only, or through use of a hand-held net. Only after all bats have emerged from the building or void will it be sealed.

- f. **All trees with moderate and high potential and confirmed roosts will be subject to an aerial inspection immediately prior to felling. If bat absence cannot be determined the trees will be subject to emergence survey. One way exclusion devices will be installed in the roost features and left in accordance with the best practice guidelines when weather conditions are suitable for bat activity. The tree will then be subject to soft, sectional felling with the felled sections left, with any access/egress points facing away from the ground, for at least three nights. Soft blocking or re-blocking of roosts or PRFs may only take place outside of the hibernation period (November to March inclusive). Felling of trees with roosts or PRFs during the hibernation period must only take place where the roost feature has been previously fully inspected or excluded and blocked prior to the hibernation period and has remained inaccessible to bats. Where roosts are present on the elevation adjacent to works areas, buffers will be created using Heras fencing to delineate working areas.**
- 12. A written record must be kept of any bat capture and exclusion undertaken, and of any other bat dispersal during destructive works. This must include dates, weather conditions with minimum overnight temperature and of any precipitation; also the numbers of each bat species captured, transported, or displaced; and the duration of bat excluder device use. This record must be provided with the Report of Action. This must be made available to any officer of Natural England or any police officer on demand (see condition 24).
 - 13. Provision must be made for prompt assistance to appropriately tend and care for any bat injured, such as during the exclusion and demolition process. Any injured or dead bats must be reported to Natural England (see condition 23).
 - 14. If individual bats are discovered unexpectedly, including if not covered under this licence or/ and if during periods of adverse weather, the following steps must be taken:
 - a. Works to that building/ structure must stop immediately. If the Named Ecologist or an Accredited Agent is not on site, they must be contacted immediately to attend site.
 - b. Do not expose any bats or cause them to fly out of the roost on its own accord.
 - c. The bat must only be handled by the Named Ecologist or Accredited Agent except if it is in immediate danger. The bat must be carefully placed in a lidded ventilated box with a piece of clean cloth and a small shallow container with some water. The box must be kept in a safe, quiet location.
 - d. Care must be taken to avoid rousing the bat during transfer to a suitable location – which may be a suitable hibernation box or other alternative roost providing a safe, quiet environment with suitable temperature and humidity levels appropriate for bats roosting at that time of year, that is safe from further disturbance.
 - e. The Named Ecologist must re-assess the structure and determine whether works can continue under this licence, or whether a modification to the licence is required prior to works re-commencing. A written record must be kept of this decision and be made available to Natural England or any police officer on request. This incidence must also be reported on this licence return form.

- f. Any underweight or injured bats must be taken into temporary care by an experienced bat carer and be looked after until such time that the bat can be transferred to a suitable replacement roost at the same site, when weather conditions are suitable for release at the same site.

Mitigation and Compensation

15. Mitigation and compensation must be provided in accordance with the licensed Figure E3. Where necessary, further details are specified in the table below:

<p>Additional details to support Figure E3: Soprano pipistrelle days roosts, beneath the stone bridge B1.1a over river Avon, inside Building B1.5a, Building B1.5b, Building B1.17a, building RB1 and building RB2 at Stoneleigh Park, to be retained. Ninety-eight (98) bat boxes of varying types with appropriate boxes for brown long-eared, common pipistrelle and soprano pipistrelle, whiskered, Brandt's and noctule bats, to include at least 1 hibernation box and 5 maternity boxes, to be erected, at a minimum height of 3 metres, on mature trees located more than 50 metres from the proposed HS2 route line at Stoneleigh Park. There will be 20 tree mounted bat boxes as interim mitigation and seven integrated bats boxes installed in the bat house. 8-figure grid reference: [REDACTED] An L-shaped dedicated bat house, measuring maximum length 6.7m x width 6.7m x height 4.6m, to be constructed in a dark zone in the north east corner of the site at Stoneleigh Park. The bat house to be constructed with brick cavity walls with exposed rafter feet at the base of the roof line to allow bat access into the structure from the wall and to provide additional roosting features. Timber weather boarding installed on the south-west and north-west elevations to be raised away from the wall and no horizontal batten at the base, to enable bat access for roosting. Hanging tiles installed on the south-east elevation at the apex of the gable ends, to be raised away from the wall to create roosting features. There is a narrow gap at the top and underneath the weather boarding and hanging tiles that will allow bats to crawl through into the loft but reduce draughts entering the loft space. Internally there is a loft area with a flight space measuring length 6.7m x width 4.7m x height 2.1m. The ground floor ceiling will be at a height of 2.5m., with a loft hatch hole for monitoring and bats access to both levels. The roof to be constructed of a rough sawn timber structure with a clay tiled roof lined with bitumen. Rough-sawn wooden battens to be fitted to the roof timbers to provide additional roosting locations. Double ridge boards to be fitted spaced 25mm apart False rafters to be installed behind rafters with 25mm between them Sarking boards to be fitted set 25mm back from roof lining. 1 bat access tile, with a gap measuring 255mm x 150mm, to be installed on the south east elevation of roof with a corresponding gap cut into the roof lining to provide access into the loft. 4 bat access bricks to be installed in the walls, 2 each on the south east and north east elevations. 1 raised roof tile to be installed on the southern elevation and a raised ridge tile to be installed on the main ridge beam, to provide bat access to the gap between the tile and the roof lining. Bat access gaps to be left in the mortar pointing up to fibre cement soffit. Seven (7) bat tubes to be installed into walls, two on south-east elevation, three on the north-east elevation and two on the north-west elevation. In addition to the 20 bat boxes stated above there will be total of 103 bat features created comprising varying types of bat box and veteranised features created on retained trees and 11 integrated bat box/ bat brick/ bat tubes. Approximately 5ha of new habitat to be planted either side of the retaining wall . The vegetation to be graduated to encourage bats to fly up and over height of trains. Stretches of tree planting to create hop overs across the track. New native hedgerow/tree planting to provide adequate cover and connectivity between the bat house and foraging habitat. Woodland edge and scrub planting to occur. A viaduct will be constructed where the HS2 line crosses over the river Avon. A Green Overbridge, widened for additional planting will be constructed where Stoneleigh Road crosses over the HS2 line.</p>
--

16. Where it is necessary to use any wood timber treatments, only treatments on the approved list of 'Bat roost and Timber products ([TIN 092](#))' may be used.
17. Where it is necessary to install a roof membrane and this has the potential to be exposed to any bat, Bitumen type 1F felt with a hessian matrix, or a non-bitumen coated roofing membrane (NBCRM) with a test certificate approved by Natural England, must be used.

Post-development maintenance

18. Any feature or structure retained, modified or otherwise provided under the terms and conditions of this licence (including those shown on Figure E3), which do not show evidence of bat use must be retained for the following minimum periods beyond the date of completion of all licensed activities relating to that feature or structure:
 - a. Non-maternity bat boxes: **5 years**
 - b. Bat lofts, bat house and maternity bat boxes: **10 years**
 - c. Other: **n/a**
19. All site maintenance and habitat management must be undertaken in accordance with licensed Figure E4 (and any further details specified below) and the licenced Habitat Management and Maintenance Plan (if referenced above). Remedial action must be undertaken where necessary. Actions must be undertaken in accordance with the timings in the licensed Work Schedule or timed as described in condition 9.

Additional details to support Figure E4: **Roost features and access points of the dedicated bat house to be kept clear and free of debris. Dedicated bat house to be kept in condition suitable for use by roosting bats. Inspection of woodland edge and scrub to take place in March and September. Any dead diseased or dying trees to be replaced in November or December. Scrub to be cut back to 1m height, trees to have 50mm thick layer of mulch around them in April or May; Reduction of shade around roosts. Any planting causing excessive shading of the bat house to be cut back or removed.**

20. Lighting restrictions under this licence include **There will be no direct lighting of the bat house or bat boxes, which are to remain in dark zones. there will be no lighting of the bridges crossing over the HS2 line.**
21. If this licence is part of a phased or multi-plot development, the Master Plan referenced **n/a** must be re-submitted, and updated if necessary, with any modifications to this licence and any future licence applications for this phased or multi-plot development.

Post-development monitoring and reporting requirements

22. Where applicable, monitoring must be undertaken in accordance with timings as specified in the licensed Work Schedule, or timed as described in condition 9, and monitoring will include: **The dedicated bat house to have 5 years of Internal and external inspections, to include recording roosting conditions, security, light spill, temperature and humidity, and single dusk and separate dawn surveys, to be carried out between June and September. If monitoring reveals the internal temperature is not optimal for bats a single bar heater powered by a small solar panel is to be installed. 4 years of bat box checks to be carried out between May and September. Retained roosts to have 3 years of external inspections and single dusk and separate dawn surveys to be carried out between June and September.**
23. The Licensee must submit a written report of actions taken under this licence, even if no action is taken, and send it to Natural England at the address shown at the top of the report form, to arrive no later than 14 days (two weeks) after the expiry of the licence. The following interim licence report/s is/are also required:
n/a
24. All records are to be made available to Natural England for inspection at any reasonable time.

NOTES

- a) The following mitigation or compensation is being provided as part of a planning permission or other consent but is not required by Natural England to be provided as part of this licence:n/a. It is the Licensee's responsibility to ensure that they comply with planning permissions and other consents as necessary.
- b) Under Regulation 60 of the Conservation of Habitats and Species Regulations 2017 (as amended), it is an offence to contravene or fail to comply with a licence condition. This includes all persons authorised to act under this licence. Failure to comply with a condition of a licence issued under The Wildlife & Countryside Act 1981 (as amended) could result in offences being committed.
- c) Under Regulation 59 of the Conservation of Habitats and Species Regulations 2017 (as amended) it is an offence to make, or to recklessly make a false statement, representation or supply information for the purposes of obtaining a licence.
- d) Natural England advises that where any individual is likely to come into contact with a bat in the operation of this licence, they should ensure that they wear suitable clothing, gloves and face masks, and have been vaccinated against European Bat Lyssavirus (EBL).
- e) Please read the details of your licence carefully to ensure that you comply with it paying particular attention to the number and species licensed as this may differ to what was requested in your application.
- f) If this licence has been issued as a result of a modification to replace the previous version of this licence, licensed totals will only relate to the period that this re-issued licence is valid.
- g) A licence is not required for the short-term keeping of injured bats that were obtained legally for the purpose of tending them in order to release them when no longer disabled. However, if the bats are to be kept for longer than 6 months then the carer should apply for a licence to possess bats. This can be done using the possession licence application form WML-A37 (found at: <https://www.gov.uk/government/publications/european-protected-species-apply-for-a-licence-to-possess-them>).
- h) To avoid transmitting COVID-19 from people to wild mammals, you should: stay at least 2 metres from live wild mammals at all times; only capture or handle live wild mammals if necessary and avoid going within 2 metres of known breeding or regularly used resting sites of mammals. If you cannot follow these guidelines, then you should minimise the time spent in close proximity and handling mammals; limit the number of people that come into close proximity or handle mammals, and keep animals separate from other individuals as far as possible.
- i) Persons acting under this licence should follow good hygiene practices, including wearing of disposable gloves, or clean and disinfected non-disposable gloves; wearing a face covering when handling and in close proximity to any mammal, and washing hands before and after close proximity or handling of any mammal. Face coverings, non-disposable gloves and overalls or other clothing should be washed / disinfected between uses when handling mammals.
- j) You should not carry out activities under this licence if you feel unwell, test positive for COVID-19 or live with someone who has or might have COVID-19.
- k) Any products used to clean and disinfect equipment should be safe for use where there could be contact with animals and used at an effective and safe dilution rate. 'Safe4' is considered to be an appropriate disinfectant for this purpose and is considered effective against the virus at a dilution of 1:50. Other products can be used to clean and disinfect equipment.
- l) How we use your personal information is set out in the Wildlife Licensing privacy notice which can be found here <https://www.gov.uk/government/publications/natural-england-privacy-notice>
- m) For licences issued in accordance with Licensing Policy 4: This licence permits activities affecting bats and their roosts that are considered most likely to result from the works described in the Licence Application. These are specified in the licensable activity table above. In its assessment of the application Natural England considered plausible scenarios involving different numbers of bats, roost types, and species, which might be affected and concluded that these impacts would be acceptable in the event they occurred. To cover this potential eventuality the compensation measures required by this licence include sufficient

provision for any of these scenarios. If it becomes apparent before or during the works that activities may result in impacts on bats that are not permitted by the licence issued to you then you must contact Natural England immediately. You should suspend those works which may result on impacts on bats which are not covered by the licence. An amended licence may be granted where appropriate.

DEFINITIONS

1. The “**Licensee**” named on the licence is responsible for ensuring that all activities carried out on site in relation to the licence comply with the terms and conditions of the licence. All persons authorised to act under the licence must comply with the licence and its conditions (see ‘Offence of breaching licence condition’ in Regulation 60 of the Conservation of Habitats and Species Regulations 2017). This means that those persons authorised by the Licensee also have a responsibility for ensuring that the licence is understood and complied with.
2. The “**Named Ecologist**” is a professional ecological consultant who has satisfied Natural England that they have the relevant skills, knowledge and experience of the species concerned and is responsible for undertaking and/or overseeing the work undertaken in respect of the licensed species. The ‘Named Ecologist’ has a responsibility for ensuring that the licence is complied with. They are responsible for advising the Licensee on the suitability and competence of any Accredited Agents or Assistants employed on site to undertake the required duties and may include the direct supervision of Assistants where appropriate.
3. An “**Accredited Agent**” is a suitably trained and experienced person who is able to carry out work under a licence without the personal supervision of the Named Ecologist. Any Accredited Agent must be appointed by the Licensee and be in possession of a letter signed by the Licensee confirming their appointment. Agents shall carry a copy of the said letter when acting under the licence and shall produce it to any police or Natural England officer on request.
4. An “**Assistant**” is a person assisting a Named Ecologist or Accredited Agent. Assistants are only authorised to act under this licence whilst they are under the direct supervision of either the Named Ecologist or an Accredited Agent.
5. Definition of roost types for the purpose of this licence are set out in the [Method Statement document](#).
6. For the purpose of this licence the following licensed methods are defined as:
 - a. **Destructive search by soft demolition:** the taking apart of a bat structure in a controlled and careful manner by hand, or in some instances with the assistance of hand-held tools and machinery, under direct ecological supervision. Only the Named Ecologist, Accredited Agent or a directly supervised Assistant may take any bats found.
 - b. **Mechanical demolition:** destruction of a structure that previously supported a bat roost using mechanical means after the structure has been declared free of bats by the Named Ecologist or Accredited Agent. Mechanical demolition usually is preceded by a soft demolition exercise or completion of an exclusion process.
