

Part 2 Area descriptions

Ancient woodland patterns in Natural Areas

The Natural Areas have been grouped according to the English Nature Team that takes the lead for that Area as follows:

English Nature Local Team	Natural Area Number (see Map page iii)
Northumbria Team	NAs 1, 2, 3, 4, 5, 6
York Team	NAs 7, 8, 9, 10, 11
Humber to Pennines Team	NA, 12, 13, 14, 15, 16
East Midlands Team	NAs 17, 18, 19, 20, 21, 22, 23
Bedfordshire, Cambridgeshire and Northamptonshire Team	NAs 24, 25, 26, 27
Norfolk Team	NAs 29, 30, 31
Suffolk Team	NAs 32, 33
Thames & Chilterns Team	NAs 34, 35, 36
Essex and London Team	NAs 28, 38, 39
Kent Team	NAs 40, 41, 42
Sussex and Surrey Team	NAs 43, 44, 45, 46
Hampshire and Isle of Wight Team	NAs 47, 48, 49, 50
Wiltshire Team	NAs 37, 51
Dorset Team	NAs 52, 53, 54
Devon & Cornwall Team	NAs 55, 56, 57, 58, 59, 60, 61, 62
Somerset and Avon Team	NAs 63, 64, 65, 66, 67, 68
Three Counties Team	NAs 69, 70, 71, 72, 73, 74
West Midlands Team	NAs 75, 76, 77, 78, 79, 80, 81
Peak District Team	NA, 82, 83, 84, 85
North-West Team	NAs 86, 87, 88
Cumbria Team	NAs 89, 90, 81, 92

For each group of Natural Areas we have produced:

- short comments on the woodland distribution pattern
- the significance of different National Vegetation Classification types (details below)
- a list of Nature Conservation Review sites (details below)
- our overall conservation assessment (details below)
- a map showing the distribution of ancient woods
- pie-charts showing relative amounts of clearance and replanting to semi-natural
- bar-charts illustrating the size distribution of ancient woodland sites

Significance of different National Vegetation Classification (NVC) types

For each Natural Area, each of the NVC types listed below (Woodland 1 to 19, excluding 18) was allocated a score according to the following system:

- 0 = no reason to believe the type occurs in the Area;
- 1 = type believed or known to occur in the Area but probably not in very large amounts;

- 2 = type judged by the Local Team to be a significant habitat in the woods of the Area (core profile data);
- 3 = type judged by Keith Kirby to be present in the Area in quantities of national significance.

A total NVC score for each Natural Area was gained by summing the scores for each NVC type, these are listed for all Natural Areas in [Appendix 2](#).

NVC communities

[W18 (native pinewoods) does not occur in England; data for W20-25 (scrub) was too inconsistent to include].

- W1 *Salix cinerea-Galium palustre* woodland
- W2 *Salix cinerea-Betula pubescens-Phragmites australis* woodland
- W3 *Salix pentandra-Carex rostrata* woodland
- W4 *Betula pubescens-Molinia caerulea* woodland
- W5 *Alnus glutinosa-Carex paniculata* woodland
- W6 *Alnus glutinosa-Urtica dioica* woodland
- W7 *Alnus glutinosa-Fraxinus excelsior-Lysimachia nemorum* woodland
- W8 *Fraxinus excelsior-Acer campestre-Mercurialis perennis* woodland
- W9 *Fraxinus excelsior-Sorbus aucuparia-Mercurialis perennis* woodland
- W10 *Quercus robur-Pteridium aquilinum-Rubus fruticosus* woodland
- W11 *Quercus petraea-Betula pubescens-Oxalis acetosella* woodland
- W12 *Fagus sylvatica-Mercurialis perennis* woodland
- W13 *Taxus baccata* woodland
- W14 *Fagus sylvatica-Rubus fruticosus* woodland
- W15 *Fagus sylvatica-Deschampsia flexuosa* woodland
- W16 *Quercus spp.-Betula spp.-Deschampsia flexuosa* woodland
- W17 *Quercus petraea-Betula pubescens-Dicranum majus* woodland
- W19 *Juniperus communis ssp. communis-Oxalis acetosella* woodland

Nature Conservation Review Sites

These are the sites identified by Ratcliffe (1977) with subsequent additions as being the most important sites that should be conserved.

Overall woodland conservation assessment

Each Natural Area has been assessed according to the following criteria and awarded an overall score:

3. Total amount of ancient woodland (x < 2000 ha; xx = 2001 - 10,000 ha; xxx > 10,000 ha)
4. Total amount of ancient semi-natural woodland (x < 2000 ha; xx = 2001-10,000 ha; xxx > 10,000 ha)
5. % cover of ancient woodland (x < 1.5%; xx = 1.6-7.0%; xxx > 7.0%)
6. NVC significance (x low; xx medium; xxx high; xxxx very high) based on Figure 5a and Table 5
7. Stand type significance based on Table 6
8. Broadleaved breeding bird score based on Figure 6
9. NCR sites (x = 1-2 sites; xx = 3-6 sites; xxx > 6 sites)
10. Overall value (Some, Moderate, High, Outstanding)

Northumbria Team

(NAs: 1 Northumberland Coastal Plain, 2 Border Uplands, 3 North Pennines, 4 Northumbrian Coal Measures, 5 Durham Magnesium Limestone, 6 Lower Tees)

Ancient woods throughout these predominantly upland areas are concentrated along the major river valleys. Hence one cluster forms a band roughly along the Border Uplands / North Pennines boundary, then fans out along the valleys of the Coal Measures.

■ *NVC significance (see Appendix 2 for key)*

<i>NVC type</i>	Wet woods							Ash-oak woods				Beech-yew woods				Acid oak-birch, juniper woods			Score

Ancient Woodland in the Natural Areas led by the Northumbria Team

York Team

(NAs: 7 Yorkshire Dales, 8 Vales of Yorkshire, 9 North York Moors, 10 Yorkshire Wolds, 11 Plain of Holderness)

The Yorkshire Dales and North York Moors are both well wooded, the Moors also stand out for their relatively large woods and high degree of replanting. The western part of the Vales of York is comparable in its ancient woodland cover to other lowland farming areas such as Middle England. Its eastern extension is however virtually free of ancient woods as are the Wolds and Plain of Holderness.

■ NVC significance (see Appendix 2 for key)

NVC type	Wet woods							Ash-oak woods				Beech-yew woods				Acid oak-birch, juniper woods			Score

Ancient Woodland in the Natural Areas led by the North and East Yorkshire Team

Humber to Pennines Team

(NAs 12 Southern Pennines, 13 Coal Measures, 14 Southern Magnesium Limestone, 15 Humberhead Levels, 16 Coversands)

The Coal Measures and Southern Magnesian Limestone form of spine with a high density of ancient woods, which contrasts with only a thin scatter in the Southern Pennines and a handful of sites only in the Humberhead Levels and Coversands.

■ *NVC significance (see Appendix 2 for key)*

Ancient Woodland in the Natural Areas led by the Humber to Pennines team

East Midlands Team

(NAs: 17 Sherwood Forest, 18 Trent Valley and Levels, 19 Charnwood Forest, 20 Lincolnshire Limestone, 21 Lincolnshire Clay Vales, 22 Lincolnshire Wolds, 23 Lincolnshire Marsh and Coast)

Charnwood Forest and Lincolnshire Clay Vales show a relatively high density of ancient woodland throughout. In the Trent Valley and Levels there is a clear east-west division; in the Lincolnshire Limestone a north-south one (the woods in the south form a cluster with those in Middle England). There is a small cluster of ancient woods along the edge of the Lincolnshire Marsh and Coast on the boulder clay, but otherwise this and the Wolds have very little. Sherwood Forest has some important individual sites, despite the overall lack of ancient woodland.

■ *NVC significance (see Appendix 2 for key)*

<i>NVC type</i>	Wet woods							Ash-oak woods				Beech-yew woods				Acid oak-birch, juniper woods			Score

Ancient Woodland in the Natural Areas led by the East Midlands team

Woodland type (hectares)

Woodland size (number of sites)

Bedfordshire, Cambridgeshire and Northamptonshire Team

(NAs: 24 Middle England, 25 Northamptonshire Uplands, 26 Bedfordshire Greensand, 27 Fenland)

NB Northamptonshire Uplands was amalgamated with the Cotswolds at a later stage in this exercise, so does not appear in some of the Tables and Figures.

The small cluster of ancient woods in the south-west of Fenland looks to be a boundary anomaly. In the rest of the Natural Areas there are distinct patterns to the distribution of ancient woodland, one of which is more or less covered by the Bedfordshire Greensand Area, but the rest sit awkwardly in relation to the Area boundaries. Those in the north appear to be contiguous (and in one case split by) clusters of woods found in the Lincolnshire Limestone intrusion, while another runs across the boundary between Middle England and the Northamptonshire Uplands.

■ *NVC significance (see Appendix 2 for key)*

<i>NVC type</i>	Wet woods							Ash-oak woods				Beech-yew woods			Acid oak-birch, juniper woods			Score

Ancient Woodland in the Natural Areas led by the Bedfordshire Cambridgeshire and Northamptonshire team

Norfolk Team

(NAs: 29 Breckland, 30 North Norfolk, 31 Broadland)

There are some outstanding individual sites but overall none of these Areas rate highly for ancient woodland. The Breck and the Broads are however important for pine belts/plantations and recent wet woodland respectively.

■ NVC significance (see Appendix 2 for key)

NVC type	Wet woods							Ash-oak woods				Beech-yew woods				Acid oak-birch, juniper wood			Score

Suffolk Team

(NAs: 32 Suffolk Coast, 33 East Anglia)

Although the density thins out a little in the northern part of the East Anglian Plain the Areas have an even scatter of relatively small woods with comparatively little replanting. This northern boundary with North Norfolk looks debateable in ancient woodland distribution terms.

■ NVC significance (see Appendix 2 for key)

NVC type	Wet woods							Ash-oak woods				Beech-yew woods				Acid oak-birch, juniper woods			Score

Thames & Chilterns Team

(NAs: 34 Chilterns, 35 Oxford Clay Vales, 36 Oxford Heights)

The Chilterns forms one of the best defined Natural Areas from a woodland point of view. The Clay Vales and Oxford Heights do not show a clear distinction in their woodland distribution and some of the clusters in the Vales link up with others in the Greater Cotswolds.

■ NVC significance (see Appendix 2 for key)

Ancient Woodland in the Natural Areas led by the Thames and Chilterns team

Essex and London Team

(NAs: 28 East Anglian Southern Chalk, 38 London Basin, 39 Thames Marshes)

The London Basin (except for London itself) is full of ancient woods, while the Thames Marshes follow the pattern of most of the other “old wetlands” and have very few. The East Anglian Southern Chalk shows a marked split - the southern section appearing to be an eastern continuation of the Chilterns while the north has lost all ancient woodland.

■ *NVC significance (see Appendix 2 for key)*
