Guidance:
 The stock will be shepherded to ensure that they rake out over the the higher ground to ensure that sheep do not spend too much time on the lower slopes, causing ecological damage to the vegetation by heavy grazing or trampling. Shepherding should also ensure stock do not stray or trespass on to neighbouring land and be used to heft flock to agreement land. Mineral/feed blocks may be used to aid shepherding with restrictions as highlighted and marked in the agreement.

NB:
A monthly record must be kept of shepherding activities and be made available on request. During the life of this agreement clough areas may be subject to woodland development schemes as outlined in the Farm Business Tenancy agreement. Grazing activites and stock numbers are subject to an annual review.
