# **AGRICULTURAL LAND CLASSIFICATION REPORT**

## **MILTON KEYNES EXPANSION STUDY AREA 8 - WEST BLETCHELY, BUCKINGHAMSHIRE**

### **SEMI-DETAILED SURVEY**

#### **INTRODUCTION**

1. This report presents the findings of a semi-detailed Agricultural Land Classification (ALC) survey on 194.8 hectares of land to the west of Bletchley, on the south-western edge of Milton Keynes in Buckinghamshire. The survey was carried out during April 1998.
2. The work was undertaken by the Farming and Rural Conservation Agency (FRCA)<sup>1</sup> on behalf of the Ministry of Agriculture, Fisheries and Food (MAFF), in connection with its statutory input to the Milton Keynes Expansion Study. This survey supersedes any previous ALC information for this land.
3. The work was conducted by members of the Resource Planning Team in the Eastern Region of the FRCA. The land has been graded in accordance with the published MAFF ALC guidelines and criteria (MAFF, 1988). A description of the ALC grades and subgrades is given in Appendix I.
4. At the time of survey, agricultural land use on the site comprised winter cereals, oilseed rape and grassland, both ley and permanent. The areas mapped as 'Other land' include farm buildings, residential dwellings and a recycling centre.

#### **SUMMARY**

5. The findings of the survey are shown on the enclosed ALC map. The map has been drawn at a scale of 1:15,000. It is accurate at this scale, but any enlargement would be misleading.
6. The area and proportions of the ALC grades and subgrades on the surveyed land are summarised in the Table 1 overleaf.
7. The fieldwork was conducted at a semi-detailed level of fieldwork, with an average density of 1 boring per 1.6 hectares. In total, 120 borings and 4 soil pits were described.
8. The agricultural land on this site has been assigned predominantly to Subgrade 3b, (moderate quality) with areas of Subgrade 3a (good quality) occurring in the north-west, centre and south-east.
9. The soils on the site are derived mainly from glacial Boulder Clay and Oxford Clay and have produced heavy land that has been classified as Subgrade 3b on the basis of soil wetness/workability restrictions. Typical profiles comprise non-calcareous clay loam topsoils (with occasional clay topsoils) over clayey subsoils which impede soil drainage. The

<sup>1</sup> FRCA is an executive agency of MAFF and the Welsh Office

combination of impeded soil drainage and the heavy topsoils causes significant soil wetness/workability problems, such that the flexibility of cropping and the opportunities for cultivation or grazing by livestock are reduced. Where the soils are less clayey, calcareous and/or better structured and thereby better drained, the land is placed in Subgrade 3a.

**Table 1: Area of grades and other land**

Grade/Other land	Area (hectares)	% surveyed area	% site area
3a	17.0	9.1	8.7
3b	170.8	90.9	87.7
Other land	7.0	-	3.6
Total surveyed area	187.8	100	96.4
Total site area	194.8	-	100

## **FACTORS INFLUENCING ALC GRADE**

### **Climate**

10. Climate affects the grading of land through the assessment of an overall climatic limitation and also through interactions with soil characteristics.

11. The key climatic variables used for grading this site are given in Table 2 and were obtained from the published 5km grid datasets using the standard interpolation procedures (Met. Office, 1989).

**Table 2: Climatic and altitude data**

Factors	Units	Values			
Grid reference	N/A	SP 840 323	SP 824 325	SP 831 325	SP 826 320
Altitude m,AOD	100	110	115	120	120
Accumulated Temperature day°C	1380	1369	1363	1358	1358
Average Annual Rainfall mm	656	658	659	661	661
Field Capacity Days days	139	139	139	140	140
Moisture Deficit, Wheat mm	104	103	102	102	102
Moisture Deficit, Potatoes mm	95	93	93	92	92
Overall Climatic Grade	N/A	Grade 1	Grade 1	Grade 1	Grade 1

12. The climatic criteria are considered first when classifying land as climate can be overriding in the sense that severe limitations will restrict land to low grades irrespective of favourable site or soil conditions.

13. The main parameters used in the assessment of an overall climatic limitation are average annual rainfall (AAR), as a measure of overall wetness, and accumulated temperature (AT0, January to June), as a measure of the relative warmth of a locality.

14. The combination of rainfall and temperature at this site means that there is no overall climatic limitation. Other local climatic factors such as exposure and frost risk are also not believed to affect the site; it is climatically Grade 1.

### **Site**

15. The site lies between approximately 100 and 120m AOD. The land is either flat or gently sloping towards the north (north of Weasel Lane) or towards the south-east (south of Weasel Lane). Nowhere on the site does gradient adversely affect agricultural land quality. Other site factors such as microrelief and flooding are not limiting.

### **Geology and soils**

16. The published geological information for the site (BGS, 1971) show the majority of the area to be underlain by glacial boulder clay as a drift deposit overlying solid Oxford Clay. Towards the extreme north-east of the site, the area immediately surrounding the stream is mapped as being underlain by alluvial drift deposits.

17. The most detailed published soils information for the site (SSEW, 1983 and 1984) shows the whole area to comprise soils from the Hanslope association. These are described as, 'Slowly permeable calcareous clayey soils. Some slowly permeable non-calcareous clayey soils. Slight risk of water erosion' (SSEW, 1983). Upon detailed field examination, soils broadly consistent with the description of the Hanslope association were found across the site.

## **AGRICULTURAL LAND CLASSIFICATION**

18. The details of the classification of the site are shown on the attached ALC map and the area statistics of each grade are given in Table 1.

19. The location of the auger borings and pits is shown on the attached sample location map and the details of the soils data are presented in Appendix II.

### **Subgrade 3a**

20. The soil profiles within the Subgrade 3a unit are affected by soil wetness and workability limitations. They have impeded drainage which gives rise to gleying below depths of 28cm. Topsoils comprise both calcareous and non-calcareous medium and heavy clay loams and, occasionally, calcareous clays which are generally stoneless or very slightly stony (up to 3% total flints). These rest over similar or slightly heavier upper subsoils which are sometimes gleyed but not slowly permeable. At depth, plastic, slowly permeable calcareous clay was found to contain up to 10% chalk and soft limestone fragments in addition to up to 8% flint stone. These soil profiles have been allocated to Wetness Class II or III (see Pit 4, Appendix II) and, given the topsoil characteristics, are placed in Subgrade 3a. These limitations will restrict the utilisation of the land by reducing the number of days when cultivations and/or grazing may occur without causing structural damage to the soil. Consequently, the flexibility of use of this land is reduced.

### **Subgrade 3b**

21. The remainder of the site has been mapped as Subgrade 3b and is also limited by soil wetness and workability restrictions. The soils within this unit comprise calcareous and non-calcareous heavy clay loam or clay topsoils which are stoneless to slightly stony (containing up to 5% total flint fragments). The profiles sometimes have shallow upper subsoil horizons which have similar characteristics to the topsoils and tend to be gleyed, calcareous and contain up to 15% soft limestone and flints. On the whole, however, the topsoils generally lie directly over denser more plastic calcareous clay subsoils (typically within 50cm of the surface). The soil inspection pits 1P, 2P and 3P reveal this denser clay to be poorly structured and slowly permeable. As a result, soil drainage will be impeded to the extent that Wetness Class III or, more commonly, Wetness Class IV is appropriate. When combined with local climatic conditions and topsoil characteristics, this degree of wetness gives rise to a land classification of Subgrade 3b. This limitation (which is more severe than for land graded as Subgrade 3a), will restrict the number of days when the soil is in a suitable condition for cultivations, trafficking by machinery or grazing by livestock without causing structural damage. The flexibility of cropping or stocking on this land, together with the yield potential of crops, will therefore be reduced.

## APPENDIX I

### DESCRIPTION OF THE GRADES AND SUBGRADES

#### **Grade 1: Excellent Quality Agricultural Land**

Land with no or very minor limitations to agricultural use. A very wide range of agricultural and horticultural crops can be grown and commonly includes top fruit, soft fruit, salad crops and winter harvested vegetables. Yields are high and less variable than on land of lower quality.

#### **Grade 2: Very Good Quality Agricultural Land**

Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural or horticultural crops can usually be grown but on some land of this grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1 land.

#### **Grade 3: Good to Moderate Quality Land**

Land with moderate limitations which affect the choice of crops, the timing and type of cultivation, harvesting or the level of yield. When more demanding crops are grown, yields are generally lower or more variable than on land in Grades 1 and 2.

##### **Subgrade 3a: Good Quality Agricultural Land**

Land capable of consistently producing moderate to high yields of a narrow range of arable crops, especially cereals, or moderate yields of a wide range of crops including cereals, grass, oilseed rape, potatoes, sugar beet and the less demanding horticultural crops.

##### **Subgrade 3b: Moderate Quality Agricultural Land**

Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass, or lower yields of a wider range of crops or high yields of grass that can be grazed or harvested over most of the year.

#### **Grade 4: Poor Quality Agricultural Land**

Land with severe limitations which significantly restrict the range of crops and/or the level of yields. It is mainly suited to grass with occasional arable crops (eg. cereals and forage crops) the yields of which are variable. In moist climates, yields of grass may be moderate to high but there may be difficulties in utilisation. The grade also includes very droughty arable land.

#### **Grade 5: Very Poor Quality Agricultural Land**

Land with severe limitations that restricts use to permanent pasture or rough grazing, except for occasional pioneer forage crops.

## **APPENDIX II**

### **SOIL DATA**

#### **Contents:**

**Sample location map**

**Soil abbreviations - explanatory note**

**Soil pit descriptions**

**Soil boring descriptions (boring and horizon levels)**

## SOIL PROFILE DESCRIPTIONS: EXPLANATORY NOTE

Soil pit and auger boring information collected during ALC fieldwork is held on a computer database. This uses notations and abbreviations as set out below.

### Boring Header Information

1. **GRID REF:** national 100 km grid square and 8 figure grid reference.
2. **USE:** Land use at the time of survey. The following abbreviations are used.

<b>ARA:</b>	Arable	<b>WHT:</b>	Wheat	<b>BAR:</b>	Barley
<b>CER:</b>	Cereals	<b>OAT:</b>	Oats	<b>MZE:</b>	Maize
<b>OSR:</b>	Oilseed rape	<b>BEN:</b>	Field Beans	<b>BRA:</b>	Brassicae
<b>POT:</b>	Potatoes	<b>SBT:</b>	Sugar Beet	<b>FCD:</b>	Fodder Crops
<b>LIN:</b>	Linseed	<b>FRT:</b>	Soft and Top Fruit	<b>FLW:</b>	Fallow
<b>PGR:</b>	Permanent Pasture	<b>LEY:</b>	Ley Grass	<b>RGR:</b>	Rough Grazing
<b>SCR:</b>	Scrub	<b>CFW:</b>	Coniferous Woodland	<b>DCW:</b>	Deciduous Wood
<b>HTH:</b>	Heathland	<b>BOG:</b>	Bog or Marsh	<b>FLW:</b>	Fallow
<b>PLO:</b>	Ploughed	<b>SAS:</b>	Set aside	<b>OTH:</b>	Other
<b>HRT:</b>	Horticultural Crops				

3. **GRDNT:** Gradient as estimated or measured by a hand-held optical clinometer.
4. **GLEY/SPL:** Depth in centimetres (cm) to gleying and/or slowly permeable layers.
5. **AP (WHEAT/POTS):** Crop-adjusted available water capacity.
6. **MB (WHEAT/POTS):** Moisture Balance. (Crop adjusted AP - crop adjusted MD)
7. **DRT:** Best grade according to soil droughtiness.
8. If any of the following factors are considered significant, 'Y' will be entered in the relevant column.

<b>MREL:</b>	Microrelief limitation	<b>FLOOD:</b>	Flood risk	<b>EROSN:</b>	Soil erosion risk
<b>EXP:</b>	Exposure limitation	<b>FROST:</b>	Frost prone	<b>DIST:</b>	Disturbed land
<b>CHEM:</b>	Chemical limitation				

9. **LIMIT:** The main limitation to land quality. The following abbreviations are used.

<b>OC:</b>	Overall Climate	<b>AE:</b>	Aspect	<b>EX:</b>	Exposure
<b>FR:</b>	Frost Risk	<b>GR:</b>	Gradient	<b>MR:</b>	Microrelief
<b>FL:</b>	Flood Risk	<b>TX:</b>	Topsoil Texture	<b>DP:</b>	Soil Depth
<b>CH:</b>	Chemical	<b>WE:</b>	Wetness	<b>WK:</b>	Workability
<b>DR:</b>	Drought	<b>ER:</b>	Erosion Risk	<b>WD:</b>	Soil Wetness/Droughtiness
<b>ST:</b>	Topsoil Stoniness				

## **Soil Pits and Auger Borings**

1. **TEXTURE:** soil texture classes are denoted by the following abbreviations:

S:	Sand	LS:	Loamy Sand	SL:	Sandy Loam
SZL:	Sandy Silt Loam	CL:	Clay Loam	ZCL:	Silty Clay Loam
ZL:	Silt Loam	SCL:	Sandy Clay Loam	C:	Clay
SC:	Sandy Clay	ZC:	Silty Clay	OL:	Organic Loam
P:	Peat	SP:	Sandy Peat	LP:	Loamy Peat
PL:	Peaty Loam	PS:	Peaty Sand	MZ:	Marine Light Silts

For the sand, loamy sand, sandy loam and sandy silt loam classes, the predominant size of sand fraction will be indicated by the use of the following prefixes:

- F: Fine (more than 66% of the sand less than 0.2mm)  
M: Medium (less than 66% fine sand and less than 33% coarse sand)  
C: Coarse (more than 33% of the sand larger than 0.6mm)

The clay loam and silty clay loam classes will be sub-divided according to the clay content:

M: Medium (<27% clay) H: Heavy (27-35% clay)

2. **MOTTLE COL:** Mottle colour using Munsell notation.
3. **MOTTLE ABUN:** Mottle abundance, expressed as a percentage of the matrix or surface described:  
F: few <2% C: common 2-20% M: many 20-40% VM: very many 40% +
4. **MOTTLE CONT:** Mottle contrast:  
F: faint - indistinct mottles, evident only on close inspection  
D: distinct - mottles are readily seen  
P: prominent - mottling is conspicuous and one of the outstanding features of the horizon
5. **PED. COL:** Ped face colour using Munsell notation.
6. **GLEY:** If the soil horizon is gleyed a 'Y' will appear in this column. If slightly gleyed, an 'S' will appear.
7. **STONE LITH:** Stone Lithology - one of the following is used:

HR:	all hard rocks and stones	FSST:	soft, fine grained sandstone
ZR:	soft, argillaceous, or silty rocks	CH:	chalk
MSST:	soft, medium grained sandstone	GS:	gravel with porous (soft) stones
SI:	soft weathered igneous/metamorphic rock	GH:	gravel with non-porous (hard) stones

Stone contents (>2cm, >6cm and total) are given in percentages (by volume).

8. **STRUCT:** the degree of development, size and shape of soil peds are described using the following notation:

Degree of development	WK:	weakly developed	MD:	moderately developed
	ST:	strongly developed		
Ped size	F:	fine	M:	medium
	C:	coarse		
Ped shape	S:	single grain	M:	massive
	GR:	granular	AB:	angular blocky
	SAB:	sub-angular blocky	PR:	prismatic
	PL:	platy		

9. **CONSIST:** Soil consistence is described using the following notation:

L: loose      VF: very friable      FR: friable      FM: firm      VM: very firm  
EM: extremely firm      EH: extremely hard

10. **SUBS STR:** Subsoil structural condition recorded for the purpose of calculating profile droughtiness: G: good M: moderate P: poor
11. **POR:** Soil porosity. If a soil horizon has less than 0.5% biopores >0.5 mm, a 'Y' will appear in this column.
12. **IMP:** If the profile is impenetrable to rooting a 'Y' will appear in this column at the appropriate horizon.
13. **SPL:** Slowly permeable layer. If the soil horizon is slowly permeable a 'Y' will appear in this column.
14. **CALC:** If the soil horizon is calcareous, a 'Y' will appear in this column.
15. Other notations:

APW: available water capacity (in mm) adjusted for wheat  
APP: available water capacity (in mm) adjusted for potatoes  
MBW: moisture balance, wheat  
MBP: moisture balance, potatoes
