

**Moving towards common standards monitoring guidance targets for SAC rivers -
Record of decisions:**

Apologies, this document is not yet available – but will be uploaded to the publications catalogue as soon as possible.

(This document will summarise the decisions made by Natural England and the Environment Agency on the standards that need to be achieved for elements of environmental quality that support the achievement of objectives for the named Natura 2000 protected area. The draft second river basin management plans will be used to consult the public about the locally proposed measures and targets.)

October 2014.
