

English Nature Research Reports, No. 668

English Nature's Research Programme 2005/2006

Report Authors: W D Hebden and J J Hopkins Date: Nov 2005

Keywords: Research, Biodiversity, Earth heritage, Habitats, Information systems, Socio-economics, Species, survey.

Introduction

This report contains the compilation of research planned to be funded by English Nature in financial year 2005/06, including research projects in which English Nature is funding partner. The report also contains a listing of publications by English Nature staff and publications by others arising from completed English Nature funded research in 2004/05.

What was done

Information on each proposed project was compiled including project title, name of English Nature project officer, completion data, cost and a brief description of the project. Projects are grouped under one of 18 programme headings.

Results and conclusions

The projects are listed individually under the relevant heading.

English Nature's viewpoint

English Nature seeks to promote and where appropriate fund applied research which is relevant to our conservation work whether it be to inform local action to safeguard important sites, advice to government and others on conservation policy, or longer term development of strategic ideas which underpin conservation action.

Further information
