English Nature Research Report

No. 76

Site management and climate

Adrian Fowler & Valerie Brown

Authors' Address:

Department of Biology, Imperial College, Silwood Park, Ascot, Berks. SL5 7PY.

Nominated Officer: Dr Andrew Farmer

Further copies of this report are available from the nominated officer at English Nature, Northminster House, Peterborough, PE1 1UA.

CONTENTS

PART I

Chapter 1 Climate and climate change	1
1.1 Climate	1
1.2 Climate and plant distribution	2
1.3 Climate change	4
1.3.1 Greenhouse gases	4
1.3.2 Predictions of climate models	4
1.3.3 Sea-level rise	6
1.4 Increasing CO₂ and plant physiology	6
1.5 Consequences of climate change for the UK	8
1.5.1 General ecological effects	8
1.5.2 Effects on natural vegetation	8
1.5.3 Effects on forestry	9
1.5.4 Effects on invertebrates	10
1.5.5 Other effects of climate change	11
a) Soils	11
b) Coastal habitats	11
1.5.6 Resume	11
Chapter 2 Microclimate	13
2.1 Introduction and definitions	13
2.1.1 Solar radiation	14
2.1.2 Air temperature	14
2.1.3 Air humidity	15
2.1.4 Soil microclimates	15
2.1.5 Wind	16
2.2 Measuring microclimate	17
2.2.1 Temperature	17
2.2.2 Radiation	18
2.2.3 Humidity	19
2.2.4 Wind	20
2.2.5 Recording microclimatic data	20
Chapter 3 Vegetation structure	21
3.1 Introduction and definitions	21
3.2 Vegetation dynamics	22

3.3 Factors affecting vegetation structure	23
3.3.1 Abiotic factors	23
a) Fire	23
b) Drought	24
c) Nutrient availability	24
d) Topography	24
e) Aspect	25
3.3.2 Biotic factors	26
a) The seed rain	26
b) Soil seed banks	26
c) Grazing	27
d) Insect herbivory	29
e) Litter	30
f) Bryophytes	30
Chapter 4 Vegetation types	31
4.1 Grasslands	31
4.1.1 Introduction	31
4.1.2 Calcareous grasslands	32
a) Nature and extent	32
b) Ecology	32
i) Flora	32
ii) Invertebrate fauna	32
4.2 Heathlands	33
4.2.1 Nature	33
4.2.2 Extent	34
4.2.3 The flora	34
a) Dominant plant species	34
b) Dry heath	35
c) Wet heath	35
4.2.4 Vegetation dynamics	35
4.2.5 The fauna	36
a) Invertebrates	36
b) Vertebrates	37
4.3 Forests	37
4.3.1 Trees	37
4.3.2 Evergreen and deciduous forests	38
4.3.3 The flora	38
4.3.4 The fauna	38
a) Vertebrates	38
b) Invertebrates	39
4.3.5 Coppiced woodlands	39
a) The flora	39
b) The fauna	40

Chapter 5 Effects of vegetation structure on the fauna	41
5.1 Effects of plant species composition	41
5.1.1 Diet breadth	41
5.1.2 Host-plant selection	42
5.1.3 Insect distribution and abundance	43
5.1.4 Species composition in relations to other attributes	43
5.2 Effects of vegetation structure	44
5.2.1 Insect herbivore communities	44
a) Species diversity	44
i) Monocultures	45
ii) Managed plant communities	46
b) Insect life-cycles strategies	47
5.2.2 Spider communities	48
a) Species composition	48
b) Spider diversity	49
i) Correlative studies	50
ii) Experimental studies	50
5.2.3 Bird communities	50
Chapter 6 Vegetation and microclimate	52
6.1 The microclimate of plant surfaces	52
6.1.1 Leaf surfaces	52
6.1.2 Leaf size	52
6.1.3 Leaf shape	54
6.1.4 Leaf reflectance	54
6.1.5 Leaf orientation	55
6.2 Effects of vegetation cover on microclimate	56
6.3 Effects of different vegetation types on microclimate	57
6.3.1 Grasslands	57
6.3.2 Heathlands	59
6.3.3 Forests	60
6.3.4 Vegetation edges and gaps	61
Chapter 7 Effects of microclimate on plants and animals	63
7.1 Plants	63
7.1.1 Established vegetation	63
a) Temperature	65
b) Radiation	66
c) Humidity	67
d) Wind	67
7.1.2 Germination	68
a) Temperature fluctuations	68
b) Light quality	69
c) Microtopography and water relations	70

7.1.3 Seedling establishment	70
a) Shade	70
b) Competition	71
c) Drought, burial and predation	71
d) The nurse effect	72
7.2 Invertebrates	72
7.2.1 Microhabitats	73
a) Soil cover and rocks	73
b) Plants	73
i) Leaves	73
ii) Flowers	74
c) Tree-trunks and logs	74
d) Leaf-litter and debris	76
7.2.2 Physiological effects of the microenvironment	76
a) Thermal balance	76
i) Size and shape	77
ii) Colour	78
iii) Insulation	80
iv) Behaviour	80
1. Posture	80
2. Orientation	81
3. Burrowing	81
4. Evaporative behaviour	81
5. Sun-shade alternation	82
6. Flight	82
b) Water balance	82
i) Size and shape	83
ii) Permeability	83
iii) Behaviour	83
c) Wind and shelter	84
Chapter 8 Case studies	86
8.1 Woodlice: an example of a cryptozoic animal	86
8.1.1 Introduction	86
8.1.2 Diurnal and seasonal rhythms	87
8.2 Rare butterflies	88
8.2.1 Dry grassland species	88
a) <u>Maculinea arion</u> (Large blue)	88
b) <u>Lysandra bellargus</u> (Adonis blue)	89
c) <u>Hesperia comma</u> (Silver-spotted skipper)	89
d) <u>Thymelicus acteon</u> (Lulworth skipper)	90
8.2.2 A heathland species:	90
<u>Plebejus argus</u> (Silver-studded blue)	
8.2.3 A woodland floor species:	91
<u>Mellicta athalia</u> (Heath fritillary)	
8.2.4 Conclusions	91

8.3 The Wart-biter	92
8.3.1 Introduction	92
8.3.2 Life-cycle and population dynamics	92
8.3.3 Habitat requirements and distribution	93
8.3.4 Ontogenetic changes	94
8.3.5 Body size and colouration	95
Chapter 9 Effects of management on vegetation structure	96
9.1 Introduction	96
9.2 Grazing	97
9.2.1 Time of year at which grazing takes place	97
9.2.2 Intensity of grazing	98
9.2.3 The type of grazing animal used	98
9.3 Cutting	99
9.4 Burning	100
9.4.1 Grasslands	100
9.4.2 Heathlands	101
9.5 Herbicides	103
9.6 Management for invertebrates	103
9.6.1 Grazing	104
9.6.2 Cutting	104
9.6.3 Fire	105
9.6.4 Timing and frequency of management	105

PART II

Chapter 10 General conclusions, predictions, management recommendations and future research	107
10.1 General conclusions	107
10.1.1 Climate change	107
a) Global warming	107
b) Climate change effects	108
i) Plants	108
ii) Invertebrates	108
10.1.2 Microclimate	109
10.1.3 Vegetation structure	109
10.1.4 Effects of vegetation structure on the fauna	109
10.1.5 Vegetation and microclimate	110
a) Grasslands	111
b) Heathlands	111

10.1.6 Microclimatic effects	111
a) Plants	112
i) Established vegetation	112
ii) Seedling regeneration	112
b) Invertebrates	113
i) Thermal balance	114
ii) Water balance	114
iii) Wind	115
10.2 Predicted effects of climate change	115
10.2.1 General vegetation changes	115
a) The direction of change	116
b) The rate of change	118
10.2.2 Changes in grassland and heathland habitats	119
a) Introduction	119
b) Autecological information	120
i) General	121
ii) Established plants	121
iii) Seedling regeneration	122
d) Changes in individual plant species	122
i) Grasslands	122
ii) Heathlands	123
c) Changes at the habitat level	123
10.2.3 Invertebrates	124
10.2.4 Generalisations	125
10.3 Management recommendations	126
10.3.1 Introduction	126
10.3.2 Conservation management	127
a) Introduction	127
b) Nature reserves	127
i) Management	127
ii) Locating	128
c) Creating habitats	128
10.3.3 Grassland management	129
a) Introduction	129
b) Management methods	129
c) Management principles	130
d) Management for individual plant species	131
e) Management for invertebrates	132
10.3.4 Heathland management	133
a) Introduction	133
b) Management methods	134
c) Management for individual plant species	134
d) Management for invertebrates	135
e) Management for vertebrates	136
i) Reptiles	136
ii) The Dartford warbler (<i>Sylvia undata</i>)	137
f) Revised management of heathlands	138
i) Burning	138
ii) Cutting	138
10.3.5 Butterfly conservation	139
10.3.6 Conserving the wart-biter	140
10.3.7 Synthesis	142

10.4 Future research relevant to climate change	142
10.4.1 Vegetation structure, microclimate and seedling establishment	143
10.4.2 Monitoring of climate change effects	144
10.4.3 Revised management in the light of climate change	147
Bibliography	150
Appendices	192

LIST OF FIGURES
