Natural England works for people, places and nature, to enhance biodiversity, landscapes and wildlife in rural, urban, coastal and marine areas; promote access, recreation and public well-being; and contribute to the way natural resources are managed so that they can be enjoyed now and in the future.

Natural England works towards the delivery of four strategic outcomes, which together deliver on our purpose to conserve, enhance and manage the natural environment for the benefit of current and future generations.

- A healthy natural environment: England's natural environment will be conserved and enhanced.
- Enjoyment of the natural environment: more people enjoying, understanding and acting to improve, the natural environment, more often.
- Sustainable use of the natural environment: the use and management of the natural environment is more sustainable.
- A secure environmental future: decisions which collectively secure the future of the natural environment.
